FDD Abstract of [REDACTED]

CONSTRUCTION OF UNDERGROUND GASOLINE DEPOTS AT SLAPANOV (German; 5 pp; [REDACTED])

25X1C

25X1X

The document describes an underground gasoline storage depot in the woods about 9 kilometers from Havlickuv Brod, on the way to Polna. The installation has been under construction for 2 years. It is being built by the Armabeton (Reinforced Concrete) National Enterprise. The depot is star-shaped, with four 50,000-hectoliter tanks at each point or a total of 20 tanks.

The earth was excavated to a depth of 6 meters, and a layer of concrete 30 centimeters deep was laid. Each tank has its own concrete foundation 50 centimeters thick. The document * gives further details of the construction and equipment of the depot.

The document describes the security precautions at the depot. There are two guard houses, each manned by two guards with wolfhounds. A wire fence 2 meters high surrounds the grounds.

The document describes the construction foreman, the cost of the project, the schedule of construction, the organization of labor, and wages. Certain serious errors made during construction are described.
